Academic History

Rochester Institute of Technology, 1997; M.S., Computer Science.
City College, 1992; B.S., Computer Science.

Core Competencies

PostgreSQL	administration, optimization and programming on the cloud (Heroku, AWS RDS/Aurora) and on-prem
SQL	expert in developing and optimizing with SQL, PL/pgSQL and PostgreSQL extensions
devops	excellence in providing global operational support and database development expertise for a multinational
modeling	relational and dimensional, for OLTP and DSS applications
Unix	30+ years experience with Linux and FreeBSD
ruby	15+ years experience for database, web and general programming

Other Skills

agile	10+ years experience with the modern agile workflow using git, Bitbucket, Jira and Confluence
automation	experienced with Ansible for database provisioning, configuration and management
containers	experienced containerizing database related toolchains with docker/podman
rails	web application development
PostGIS	programmed geospatial applications with PostGIS

Employment Record

07/2019–

Align Technology
Expert Cloud Database Engineer, responsible for Invisalign doctor portal databases—development and operations. Manages a mix of PostgreSQL clusters on Heroku and AWS RDS/Aurora. Reviews all pull requests for database related code, mentors developers, and advocates best practices. Researches database related performance bottlenecks and proactively fixes them. Programming with PL/pgSQL, ruby and Ansible.

12/2018–05/2019

Workstand
Data Architect, designed databases to support migrating from a monolithic to a microservice architecture. Implemented data migrations and Elasticsearch indices. Provisioned PostgreSQL infrastructure on GCP Linux, with high availability (streaming replication), automated backups (Barman) and connection pooling (PgBouncer).

5/2017–10/2018

Pace Computer Solutions
Subject Matter Expert, Social Security Administration. Implemented custom PostgreSQL infrastructure on AWS EC2 Linux with automated provisioning, high availability (streaming replication), backups, point-in-time recovery, and monitoring. Programming with Ansible, bash, perl and ruby.

3/2015–3/2017

CGH Technologies
Senior Data Architect, Federal Aviation Administration. Designed databases for airspace applications, developed applications' database codebase and supported operations. Setup on-prem PostgreSQL with high availability (streaming replication), backups and monitoring. Developed processes for calculating and delivering airspace data feeds to production and development databases. Programing using PL/pgSQL, ruby and PostGIS.

Acquisition Technologies

12/2005–2/2014

Senior Database Engineer at Raytheon. Managed `PostgreSQL` databases that ingest data from `NASA`'s earth orbiting satellites. Authored core `PostgreSQL` infrastructure: automatic generation of database patches from source control, an advanced `ruby PostgreSQL API`, the automated backup system, and a good portion of application logic residing in databases as functions. Key contributor to the development of a migration plan for transitioning from `Sybase ASE` to `PostgreSQL`, and executing the plan at `NASA`'s data centers. Central role in the migration of a large `Sybase ASE` codebase of stored procedures to `PostgreSQL` functions. Mentored and guided development teams with respect to anything database related. Developed and maintained a web geospatial application that gives users the ability to "subscribe" to earth data of interest. Data modeling, database administration and programming with `Sybase ASE` and `PostgreSQL` using `T-SQL`, `PL/pgSQL`, `perl`, and `ruby` on `Linux` and `Solaris`.

Technology Professionals Exchange

4/2005–12/2005

Project Lead at AOL Inc., Quality Engineering Team. Developed data marts to support analysis of product "phone-home" data. Performed system analysis, designed and deployed dimensional data marts onto `Microsoft SQL Server`. Implemented the `ETL` processes for staging, cleaning, and loading the data feeds onto the data marts. Programming with `perl` on `Microsoft Windows`.

PTFS

9/1998–9/2004

Project Lead, at the U.S. Naval Research Laboratory. Lead the development of the web based system that NRL scientists use to search and browse articles from thousands of scientific journals from all the major publishers. Built the development team and provided mentoring and technical direction. Received technical excellence award. The system received numerous awards and high praise from end-users. Various U.S. government organizations (DOD, NASA, NIST, etc.) pay for access to it. Data modeling, database programming and administration with `Sybase ASE`, application development with `perl` and `C` on `Solaris`.

Rochester Institute of Technology Research Corporation

4/1994–8/1998

Computer Scientist, member of the 2000 U.S. Census Data Capture System team. Assisted the U.S. Census Bureau with defining requirements for the 2000 U.S. Census Data Capture System, and facilitated the publication of a high quality RFP. Invited by the winning contractor, `Lockheed Martin`, to join their development team, responsible for the implementation of the `Optical Mark Recognition` subsystem for the 2000 Census. C++ and `perl` programming on `Microsoft Windows` and `Unix`.

Intracom

5/1992–8/1992

Summer intern; member of the development team that implemented the command editor for the `Ericsson AXE-10` digital telephone exchange on behalf of the `Hellenic Telecommunications Organization`; Programming in `C`.
